## Safety & Care rains and Strains

Sprain and strain injuries are the leading cause of time loss injuries for workers across the Northwest Territories and Nunavut.

## What causes sprain, strain, and tear injuries?

- Force lifting, pushing, pulling, or carrying.
- Posture working in static posture (the same position for a long time • with little or no movement) or awkward postures such as bending over or twisting.
- Repetition performing the same movement over and over without breaks or time to recover.
- Vibration hand or arm vibration from holding a tool or equipment that vibrates continuously, or whole-body vibration from sitting or standing on equipment that vibrates.

## What are the symptoms of sprains and strains?

Some signs include: aching, burning, or shooting pain; tingling; weakness; inability to move; swelling or tenderness; numbness; and fatigue.

Don't ignore symptoms: recognize and report them as soon as possible. Early signs and symptoms can progress into conditions which can have long-term effects.

Talk to your supervisor and follow your safety program, which should include working together to identify hazards (i.e. the cause of the problem), and seek ways to reduce or eliminate the hazard.

## What are Employers required to do?

- Identify job-related hazards; •
- Train workers about their job's hazards;
- Work together to eliminate risk factors; •
- Follow up to make sure controls are • working; and
- Ensure workers report early symptoms or • concerns.
